

Expanded Glareshield Modification for Cessna Citation 500/550/560 & S550 Series

Expanded Glareshield

***Southern Star Avionics* has developed an expanded glareshield modification option for Cessna Citation 500/550/560 and S550 Series business jets.**

The expanded glareshield modification is a complete turnkey product produced under STC in our facility in Mobile, Alabama. Your glareshield, thrust reverser/fire bottle tray and master annunciator panel are shipped to our facility and fitted with the expansion modification, rewired and function tested in as little as 5 business days.

The expanded glareshield modification features a high quality UV stabilized covering that was developed specifically for glareshield applications. For added good looks we incorporate a decorative French seam sewn with cadet gray thread and the thrust reverser EL panels are changed to gray with white letters to complete the custom look.

There are numerous benefits of an expanded glareshield. The enhanced panel fits neatly over the existing glareshield. The expanded glareshield provides additional panel space for today's modern avionics packages by moving the annunciator panel, fire and thrust reverser controls directly in your line of sight for increased visibility.

An STC document package with complete installation and test procedures is supplied with each glareshield. The modification is also approved by Air Transport Canada, EASA, Mexico, and Brazilian authorities.

EXPANDED

GLARESHIELD

Southern Star Avionics, LLC, is a partnership between Southern Avionics & Communications, Inc., and Star Aviation.

Southern Star Avionics specializes in offering engineering, STC certification, manufacturing, and installation of post-modification products for most general and business aircraft in a single location. Southern Star Avionics is your most efficient source for upgrading your aircraft.
